The status of the related application(s) cited at the first page of the specification should be updated, if necessary, to ensure a properly completed file record.

The Examiner acknowledges Applicant's attempt to place the instant application in compliance with the Sequence Rules. However, Applicant's CRF was damaged and could not be read. The nature of the damage is unknown to the Examiner but it may have been due to the necessity of irradiating Applicant's submission for security purposes. A new copy of the CRF is required. See attached Notice to Comply with Sequence Rules for additional information.

Applicant's election of Group I, claims 1-13 and the species BRU124F1X, in Paper No. 6, is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse. See M.P.E.P. 818.03(a).

The Examiner acknowledges Applicant's Amendment, Paper No. 6, filed February 4, 2002. In view of Applicant's Amendment, the status of the claims is as follows: Claim 15 has been canceled; claims 13-14 and 16-25 have been withdrawn from consideration as being directed to a non-elected invention; Claims 1-12 are currently pending before the Examiner.

The Examiner acknowledges Applicant's submission of missing pages 24 and 25 of the specification. However, there is no copy of the receipt postcard confirming Applicant's original filing of these pages. In the absence of this evidence, the missing pages of the specification have not been entered in the file record. Applicant should submit a copy of the receipt postcard as evidence that the pages do not constitute **NEW MATTER** to the specification. Upon receipt of convincing objective evidence, the Examiner will

10

15

20

25

30

consider entering the pages into the specification.

The application is objected to because of alterations which have not been initialed and/or dated as is required by 37 C.F.R. 1.52(c) and 1.56. A properly executed oath or declaration which complies with 37 CFR 1.67(a) and identifies the application by serial number and filing date is required. Examples are at page 7, line 25, reciting "1 + 10" and page 8, line 7, reciting "1 + 6." Applicant is required to review the specification for any improper changes/alterations and take appropriate action in response to this Office Action.

A substitute specification is required in response to this Office Action because the specification fails to comply with the Sequence Rules and the necessary amendments for compliance would be to extensive for entry in the file. The substitute specification filed must be accompanied by a statement that it contains no new matter. Such statement must be a verified statement if made by a person not registered to practice before the Office.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is vague and indefinite in the recitation "Z is OH or NH2." since a claim cannot have a period in the middle of the claim. Amendment of claim 1 to delete "." would obviate this rejection. Claim 6 is vague and indefinite in the recitation "substantially all" since it is entirely unclear how

5

10

15

20

25

30

much immunological reactivity would constitute "substantially all." Amendment of claim 6 to delete "substantially" would obviate this rejection.

The following is a quotation of the first paragraph of 35 U.S.C. § 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claimed invention is directed to methods using peptides of HIV "where oligopeptides having at least six amino acids...will include epitopes within such sequence" (see claims 1 and 12). Further, Applicant's claimed invention encompasses peptides "modified by the substitution, addition or deletion of amino acid residues" (see claim 6). specification does not set forth sufficient teachings to enable one skilled in the art to identify and use such six amino acid sequences with a reasonable expectation of success and without It is well known in the art that a undue experimentation. particular epitope varies from species to species and even within the same species. Further, it is well known in the art that modification of peptides such as Applicant's claimed peptides can and often does abrogate antigenicity. In particular, modification of as little as one amino acid can reduce or eliminate antibody Modification of immunological peptides is highly unpredictable and Applicant has provided no guidance or working

10

15

20

25

30

examples to enable one skilled in the art to make such epitopes and modified proteins without undue experimentation. Applicant has attempted to claim any and all epitopes within a given sequence but has not set forth sufficient teachings to allow one skilled in the art to identify these epitopes without extensive trial and error, i.e., an invitation to experiment. Thus, the specification fails to enable the full scope of the claimed invention.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office Action:

A person shall be entitled to a patent unless--

(b) the invention was patented or described in a printed publication in this country or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. § 102(b) as being anticipated by Cosand et al., EP 0 267 802 (Applicant's AE). It is noted that the reference is listed on Applicant's Form PTO-1449 as having a publication date of March 4, 1998. However, this date if for publication of the application with mention of the grant of the patent. The publication date of the application is shown as May 18, 1988 and, hence, the reference is prior art to the instant application under 35 U.S.C. § 102(b).

Cosand et al. disclose peptides and oligopeptides and methods for detecting the presence of antibodies to HIV. Cosand discloses the peptide designated (IIa) (124) which is identical to the BRU124F1X peptide except that the BRU124F1X peptide is 10 amino acids longer (see Cosand et al., page 4, lines 45-51). However, since the oligopeptides of Cosand et al. can be 6 amino acids long

. . . i

5

10

15

20

(see page 3, lines 27-29) which is identical to the "at least six amino acids" of the claimed peptides used in the claimed methods, Cosand et al. discloses to the public that which is claimed in the instant application and, inasmuch as this disclosure was made more than one year prior to the filing of this patent application, the issuance of a patent is barred.

No claim is allowed.

Papers relating to this application may be submitted to Group 1600 by facsimile transmission. The Fax number is (703) 308-4242. Please note that the faxing of such papers must conform with the Notice published in the Official Gazette, 1096 OG 30, (November 15, 1989).

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Robert D. Budens at (703) 308-2960. The Examiner can normally be reached Monday-Thursday from 6:30 AM-4:00 PM, (EST). The Examiner can also be reached on alternate Fridays. If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, James Housel, can be reached at (703) 308-4027.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist at (703) 308-0196.
